

Sorbetes Ordering & Auth System

Revised Flowchart · v8 (auth switches to Google OAuth; sample-review rules locked)

Supersedes v1-v7. Read top-to-bottom on each page. Companion text spec still needs syncing.

Legend (same shapes & colors as original)

	Start / End terminator (ellipse)
	Page (public)
	Authenticated page
	Decision point (diamond)
	Process
	Input
	Object created (order - once per order)
	State / status update
	Predefined process / subflow (double border)
	Annotation / open item

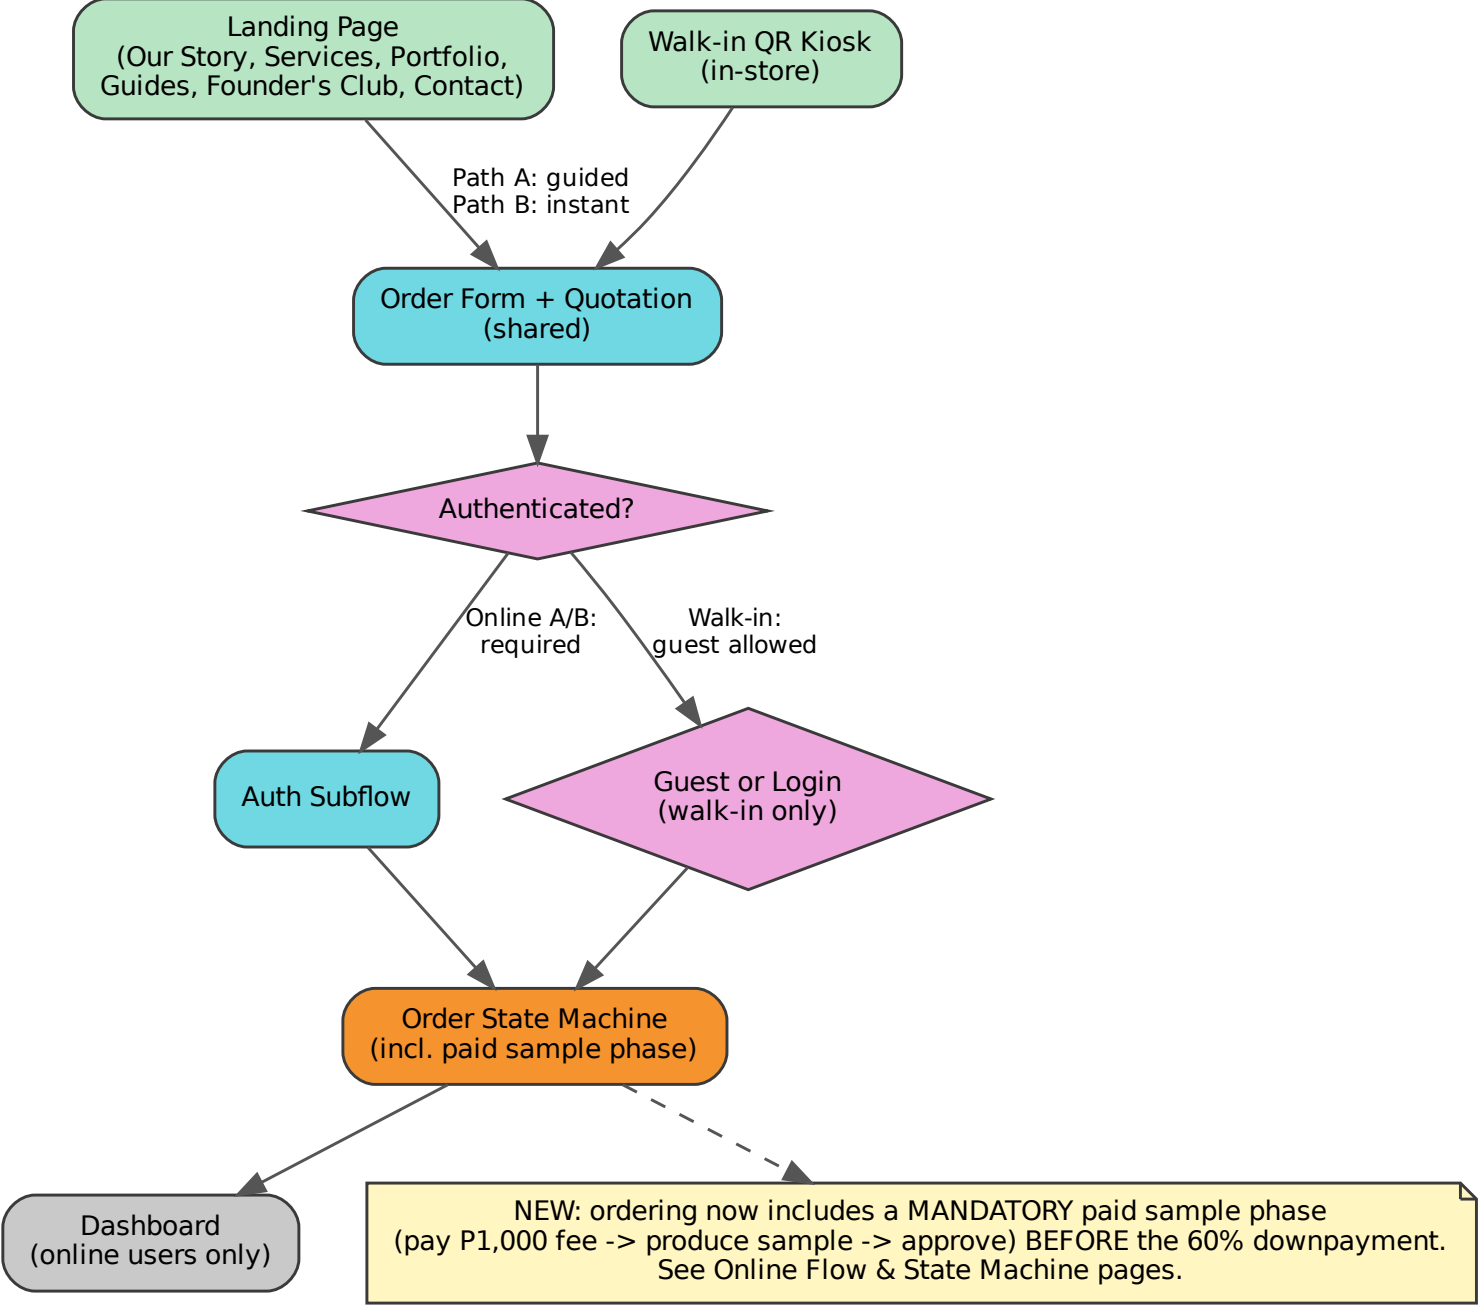

Confirmed in this revision

- Full customer journey; 3 entry surfaces.
- AUTH via Google OAuth (Google Auth API) - no passwords / OTP / reset.
- Guests: NO digital lookup (in-store / seller / SMS); logged-in = Dashboard.
- Walk-in LOGIN = online post-auth flow (account-linked); guest = SMS-only.
- Mandatory PAID SAMPLE PHASE before the 60% downpayment.
- 3 payments: P1,000 sample fee (SEPARATE, not credited) -> 60% -> 40%.
- Sample review: client approves; SELLER classifies minor vs major.
- MINOR = fixed in-house (no fee); MAJOR = pay another P1,000 + remake.
- TWO payment subflows: Online (NO cash) vs Walk-in (with cash + counter).
- Payment = manual proof review (PayMongo auto-confirm deferred).

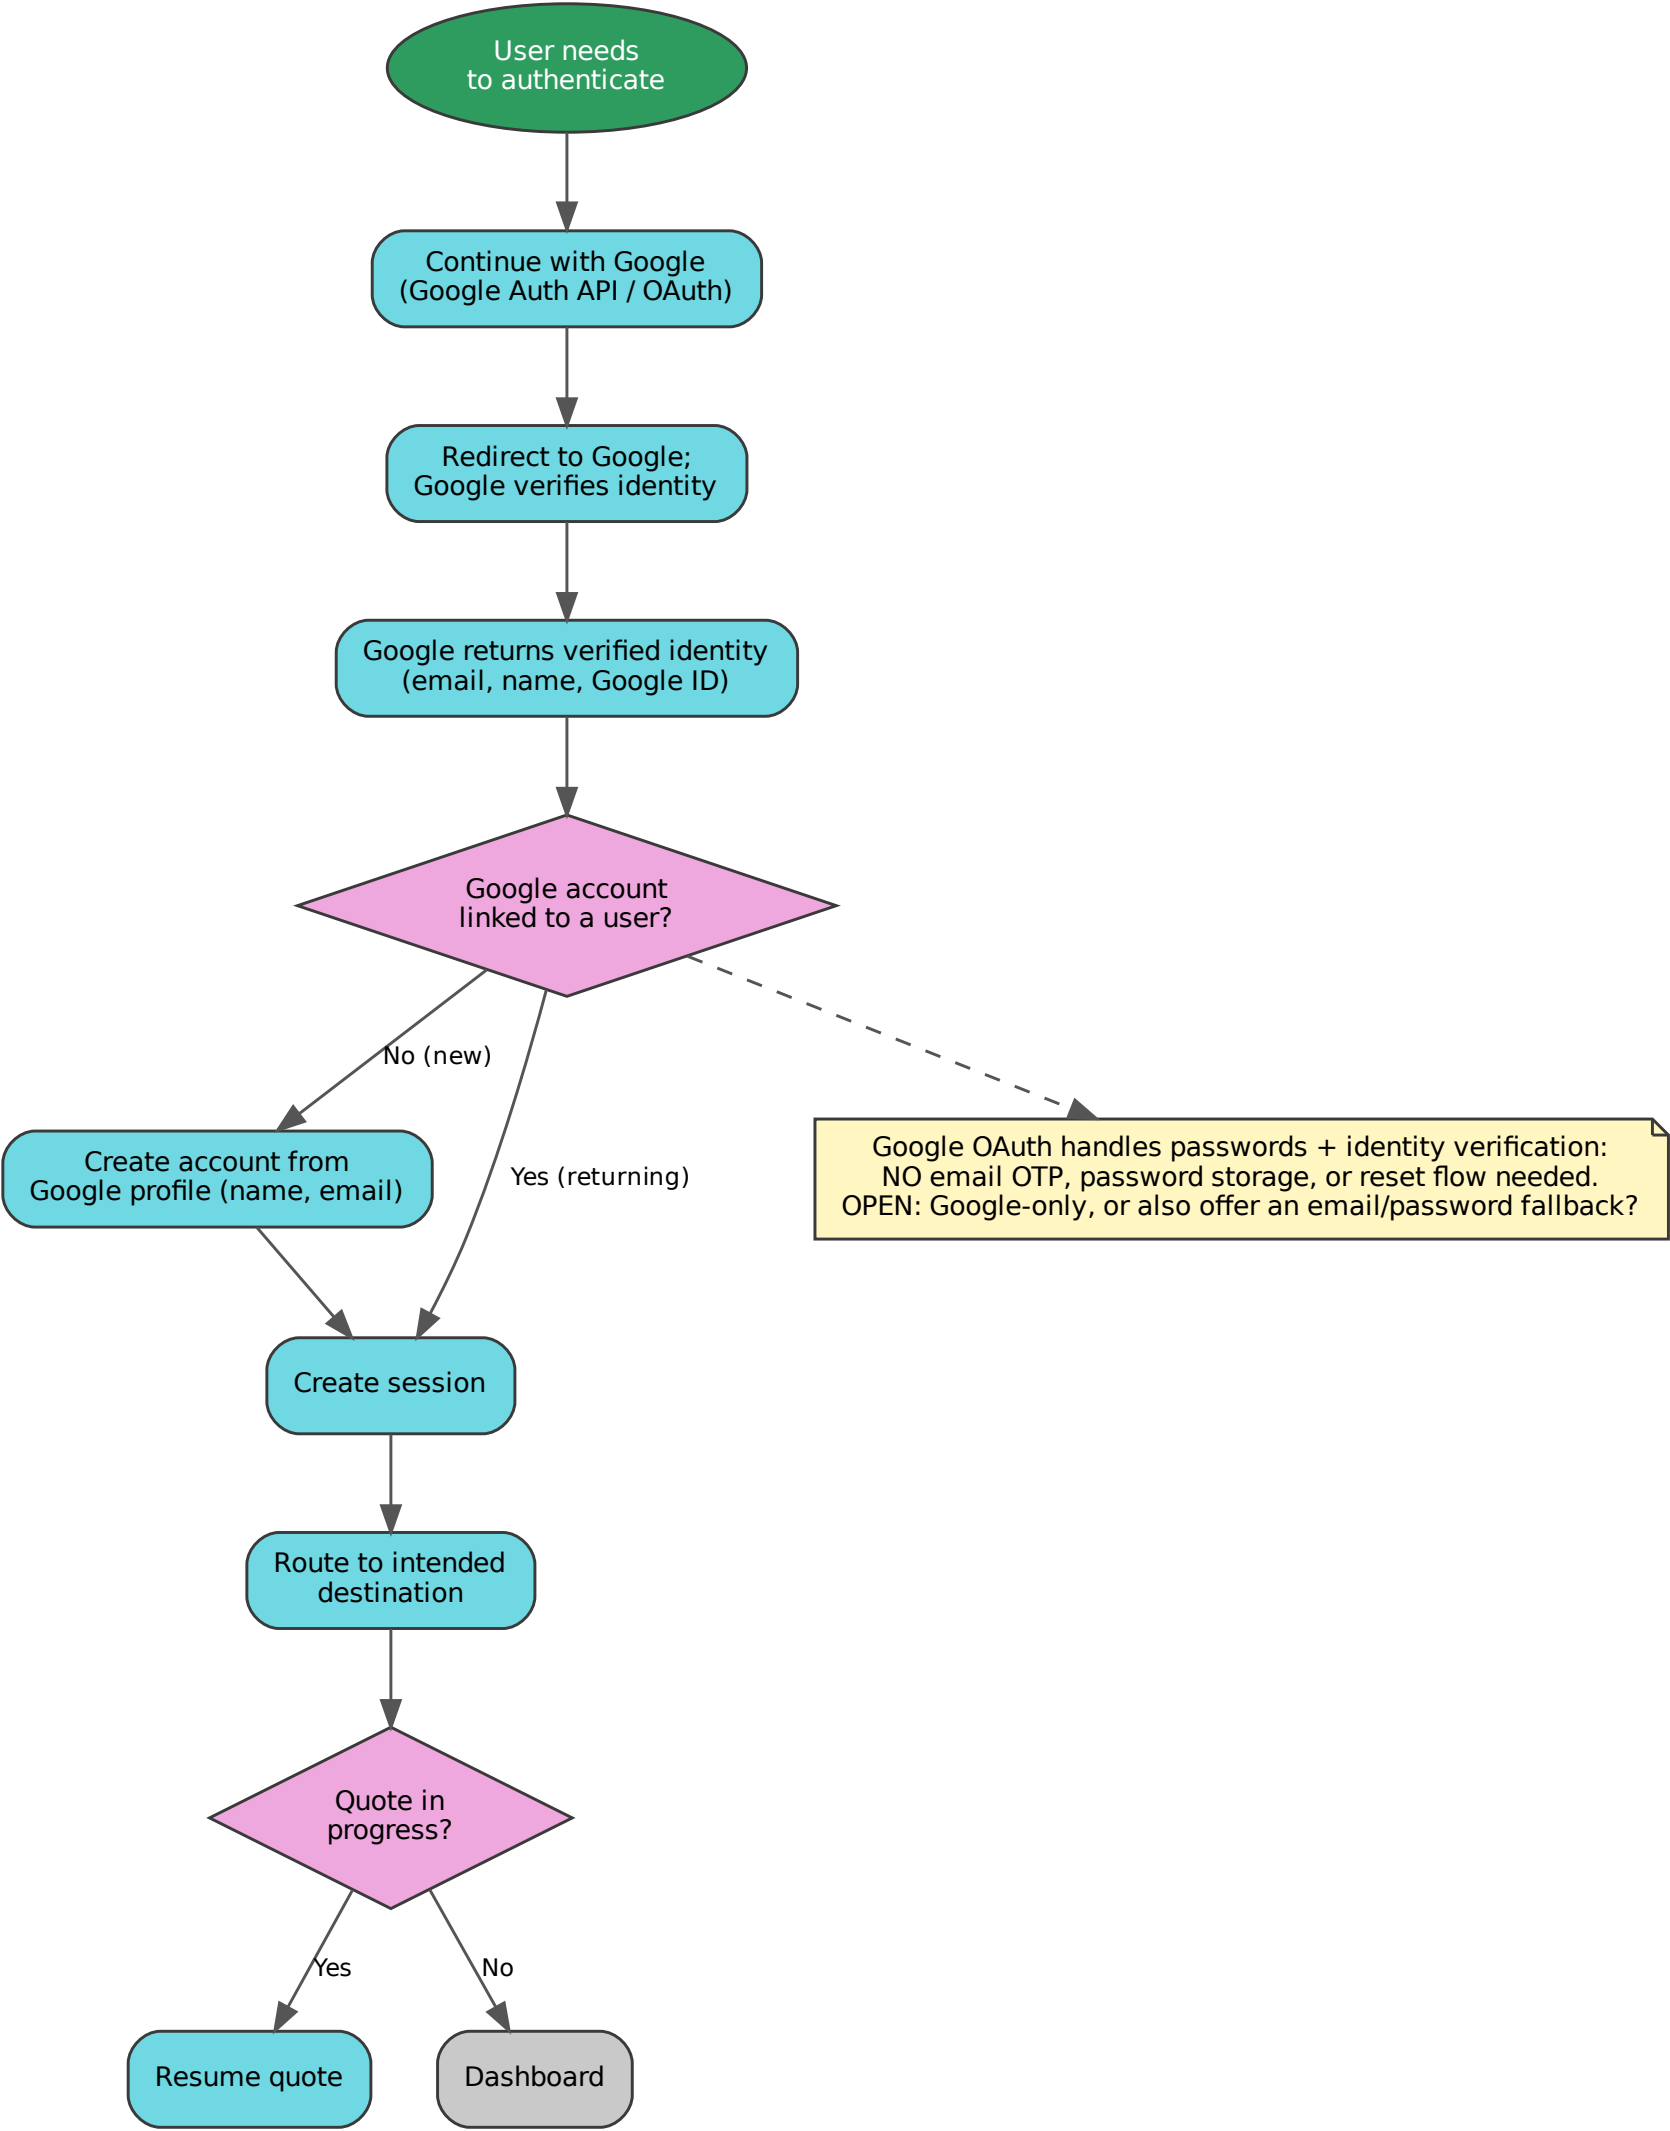

Still open (needs your call)

- Auth: Google-only, or also keep an email/password fallback?

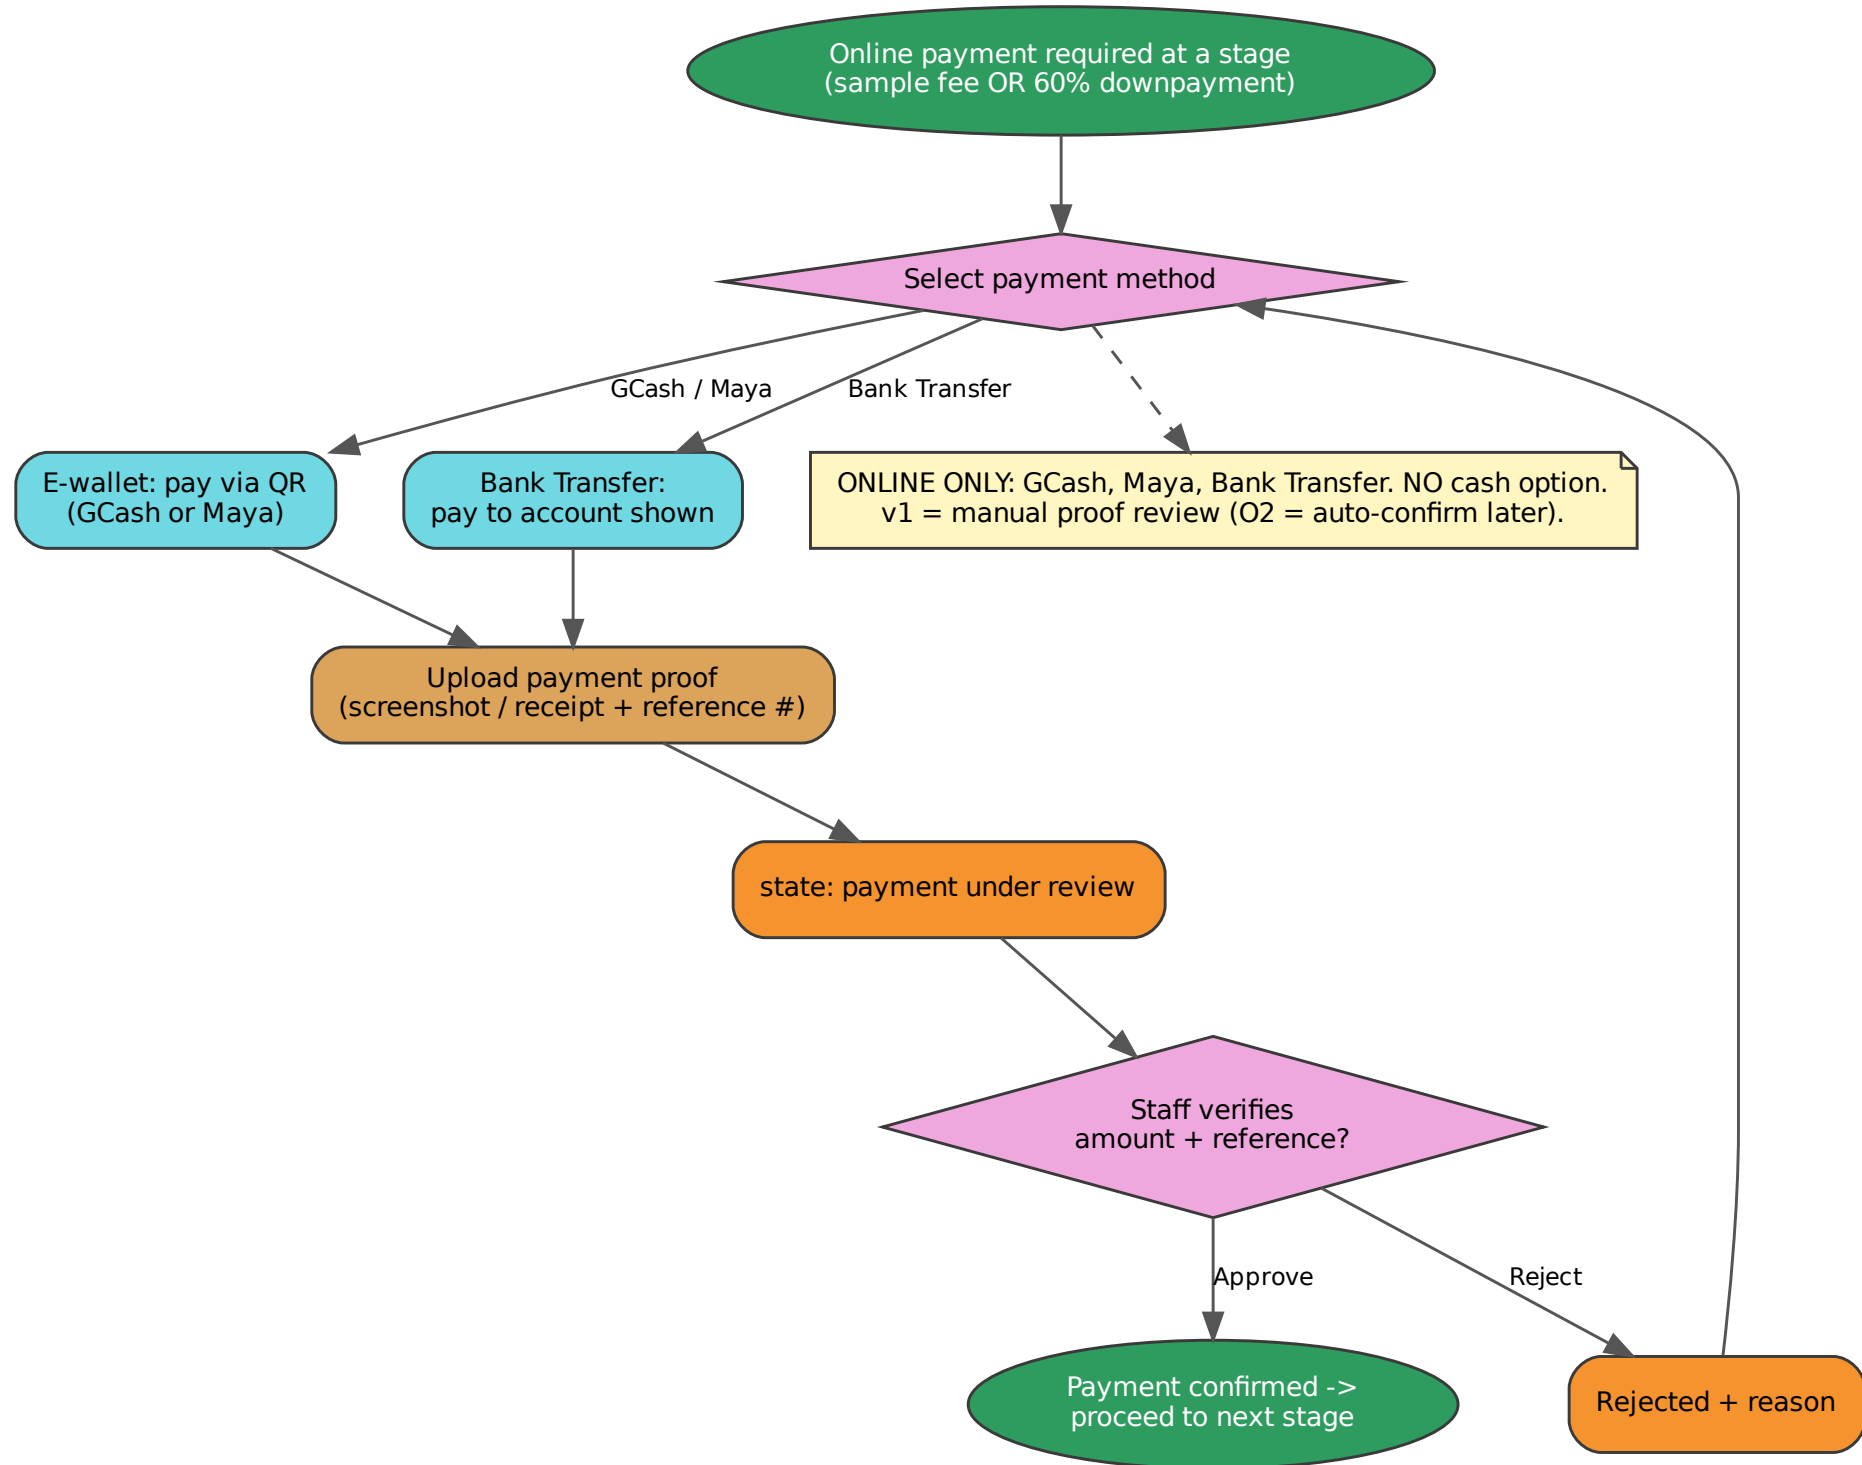

Top-Level System Map (Revised v8)

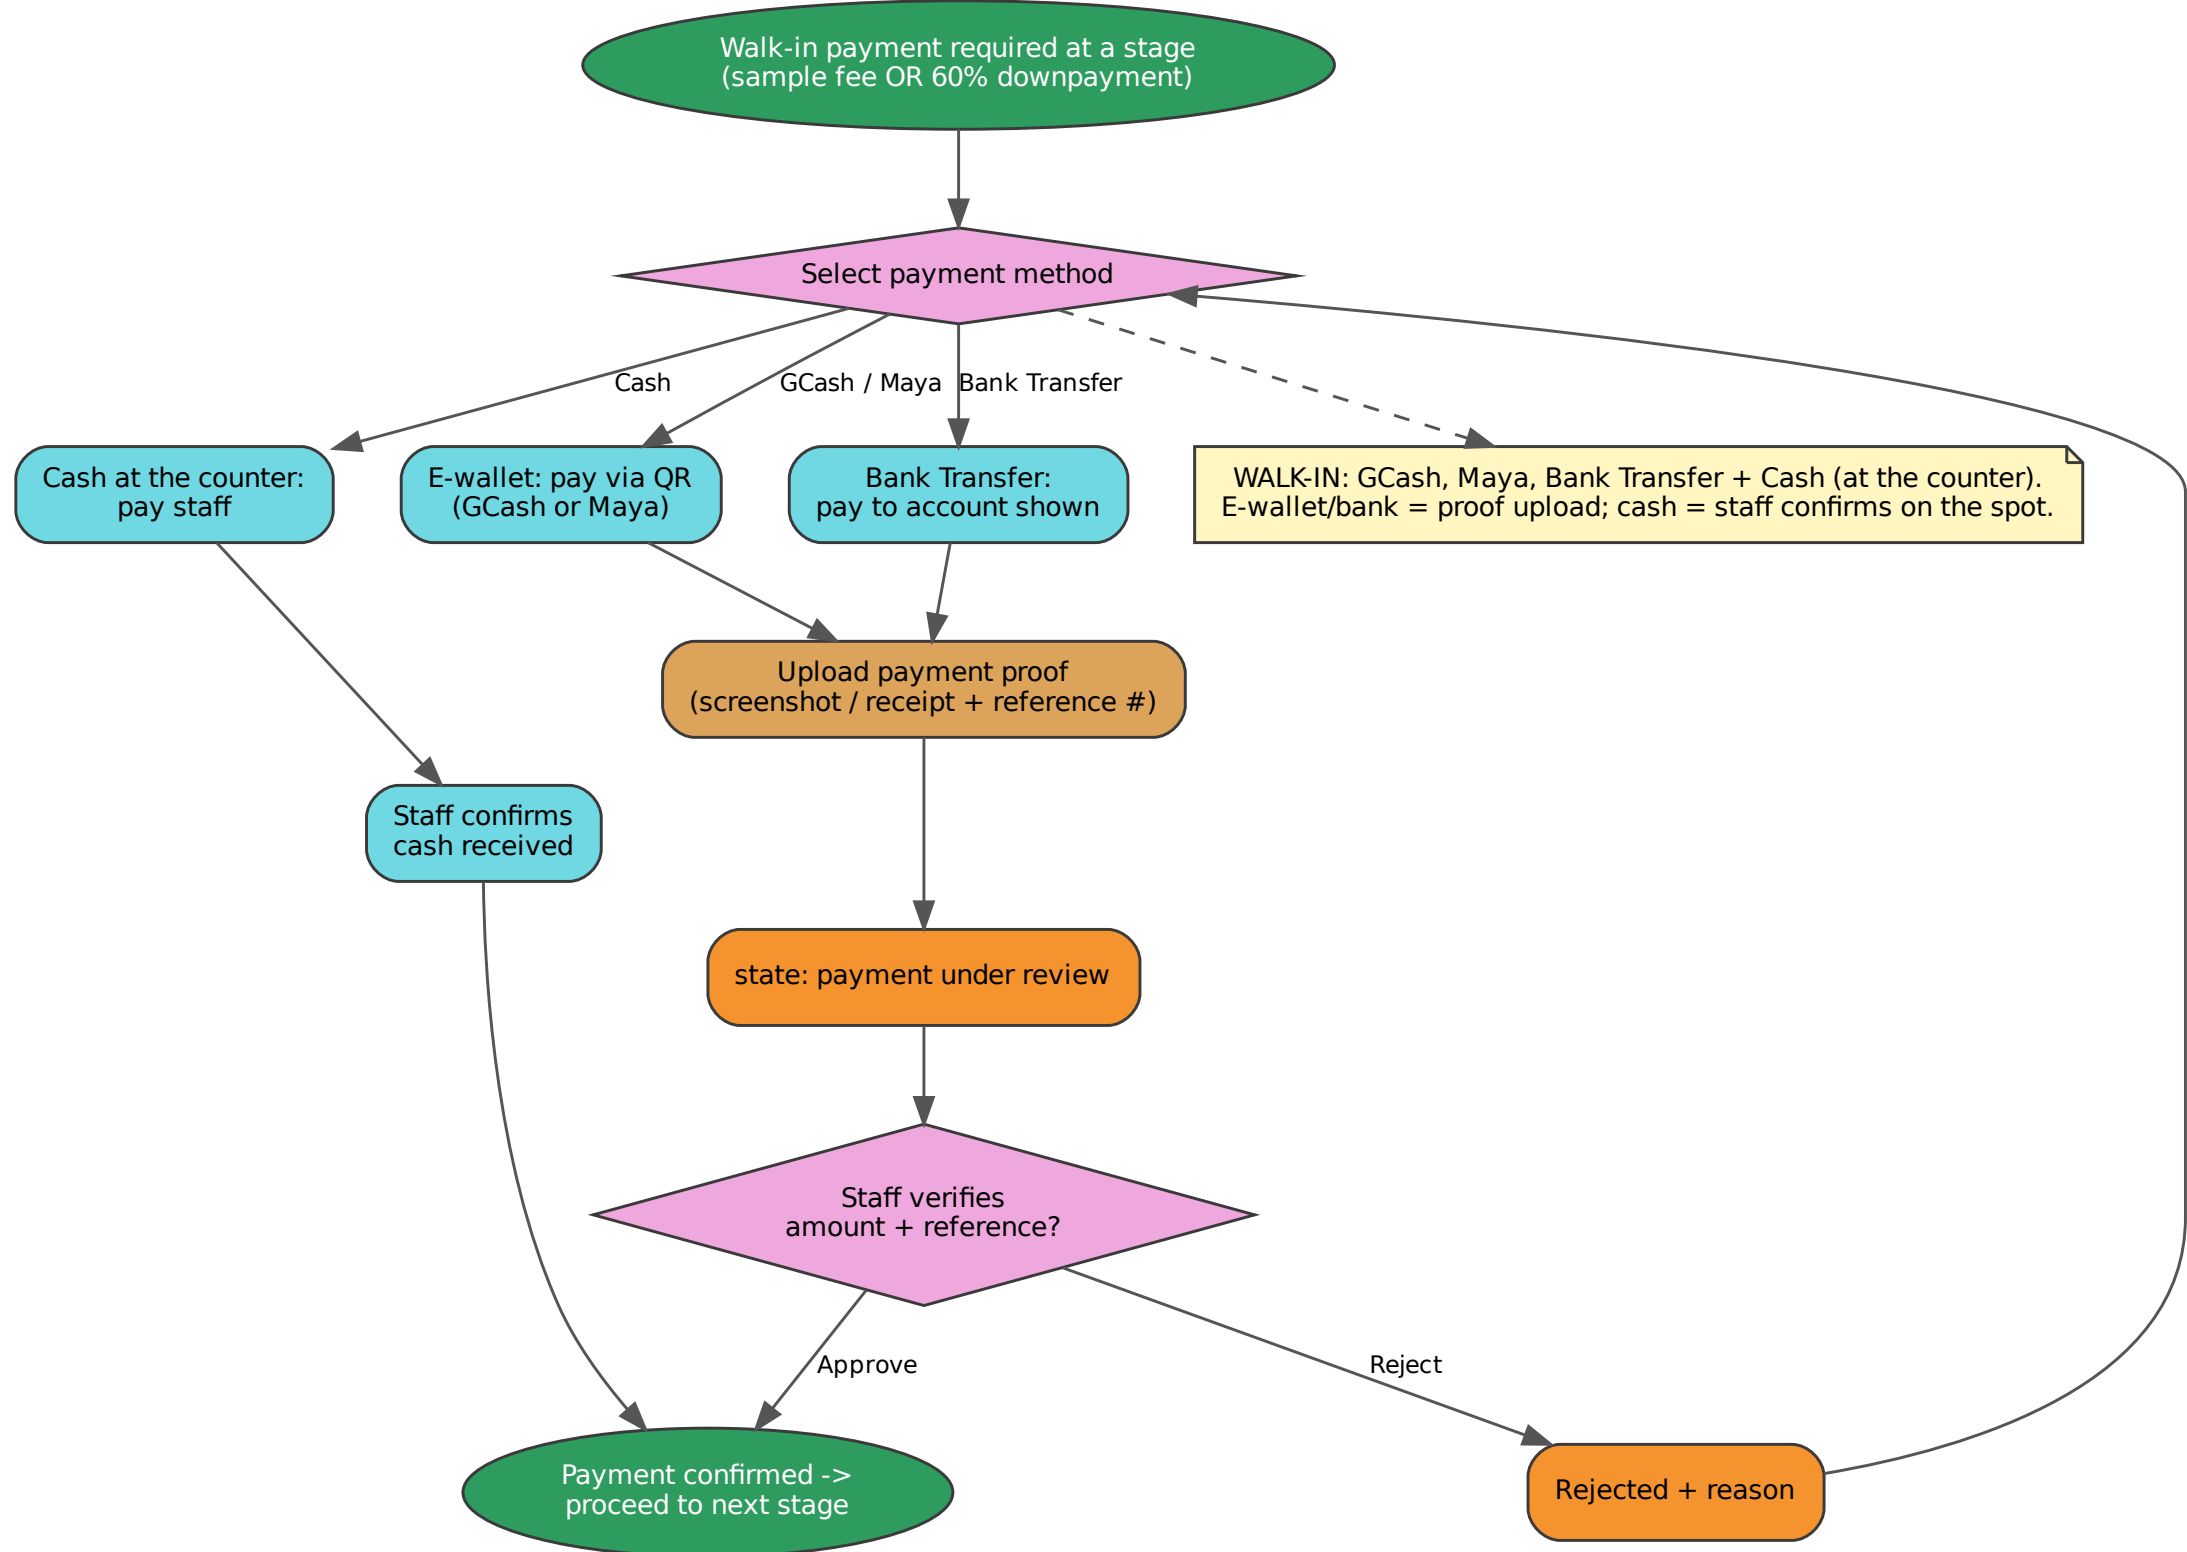

Authentication Subflow — Google OAuth (Revised v8)

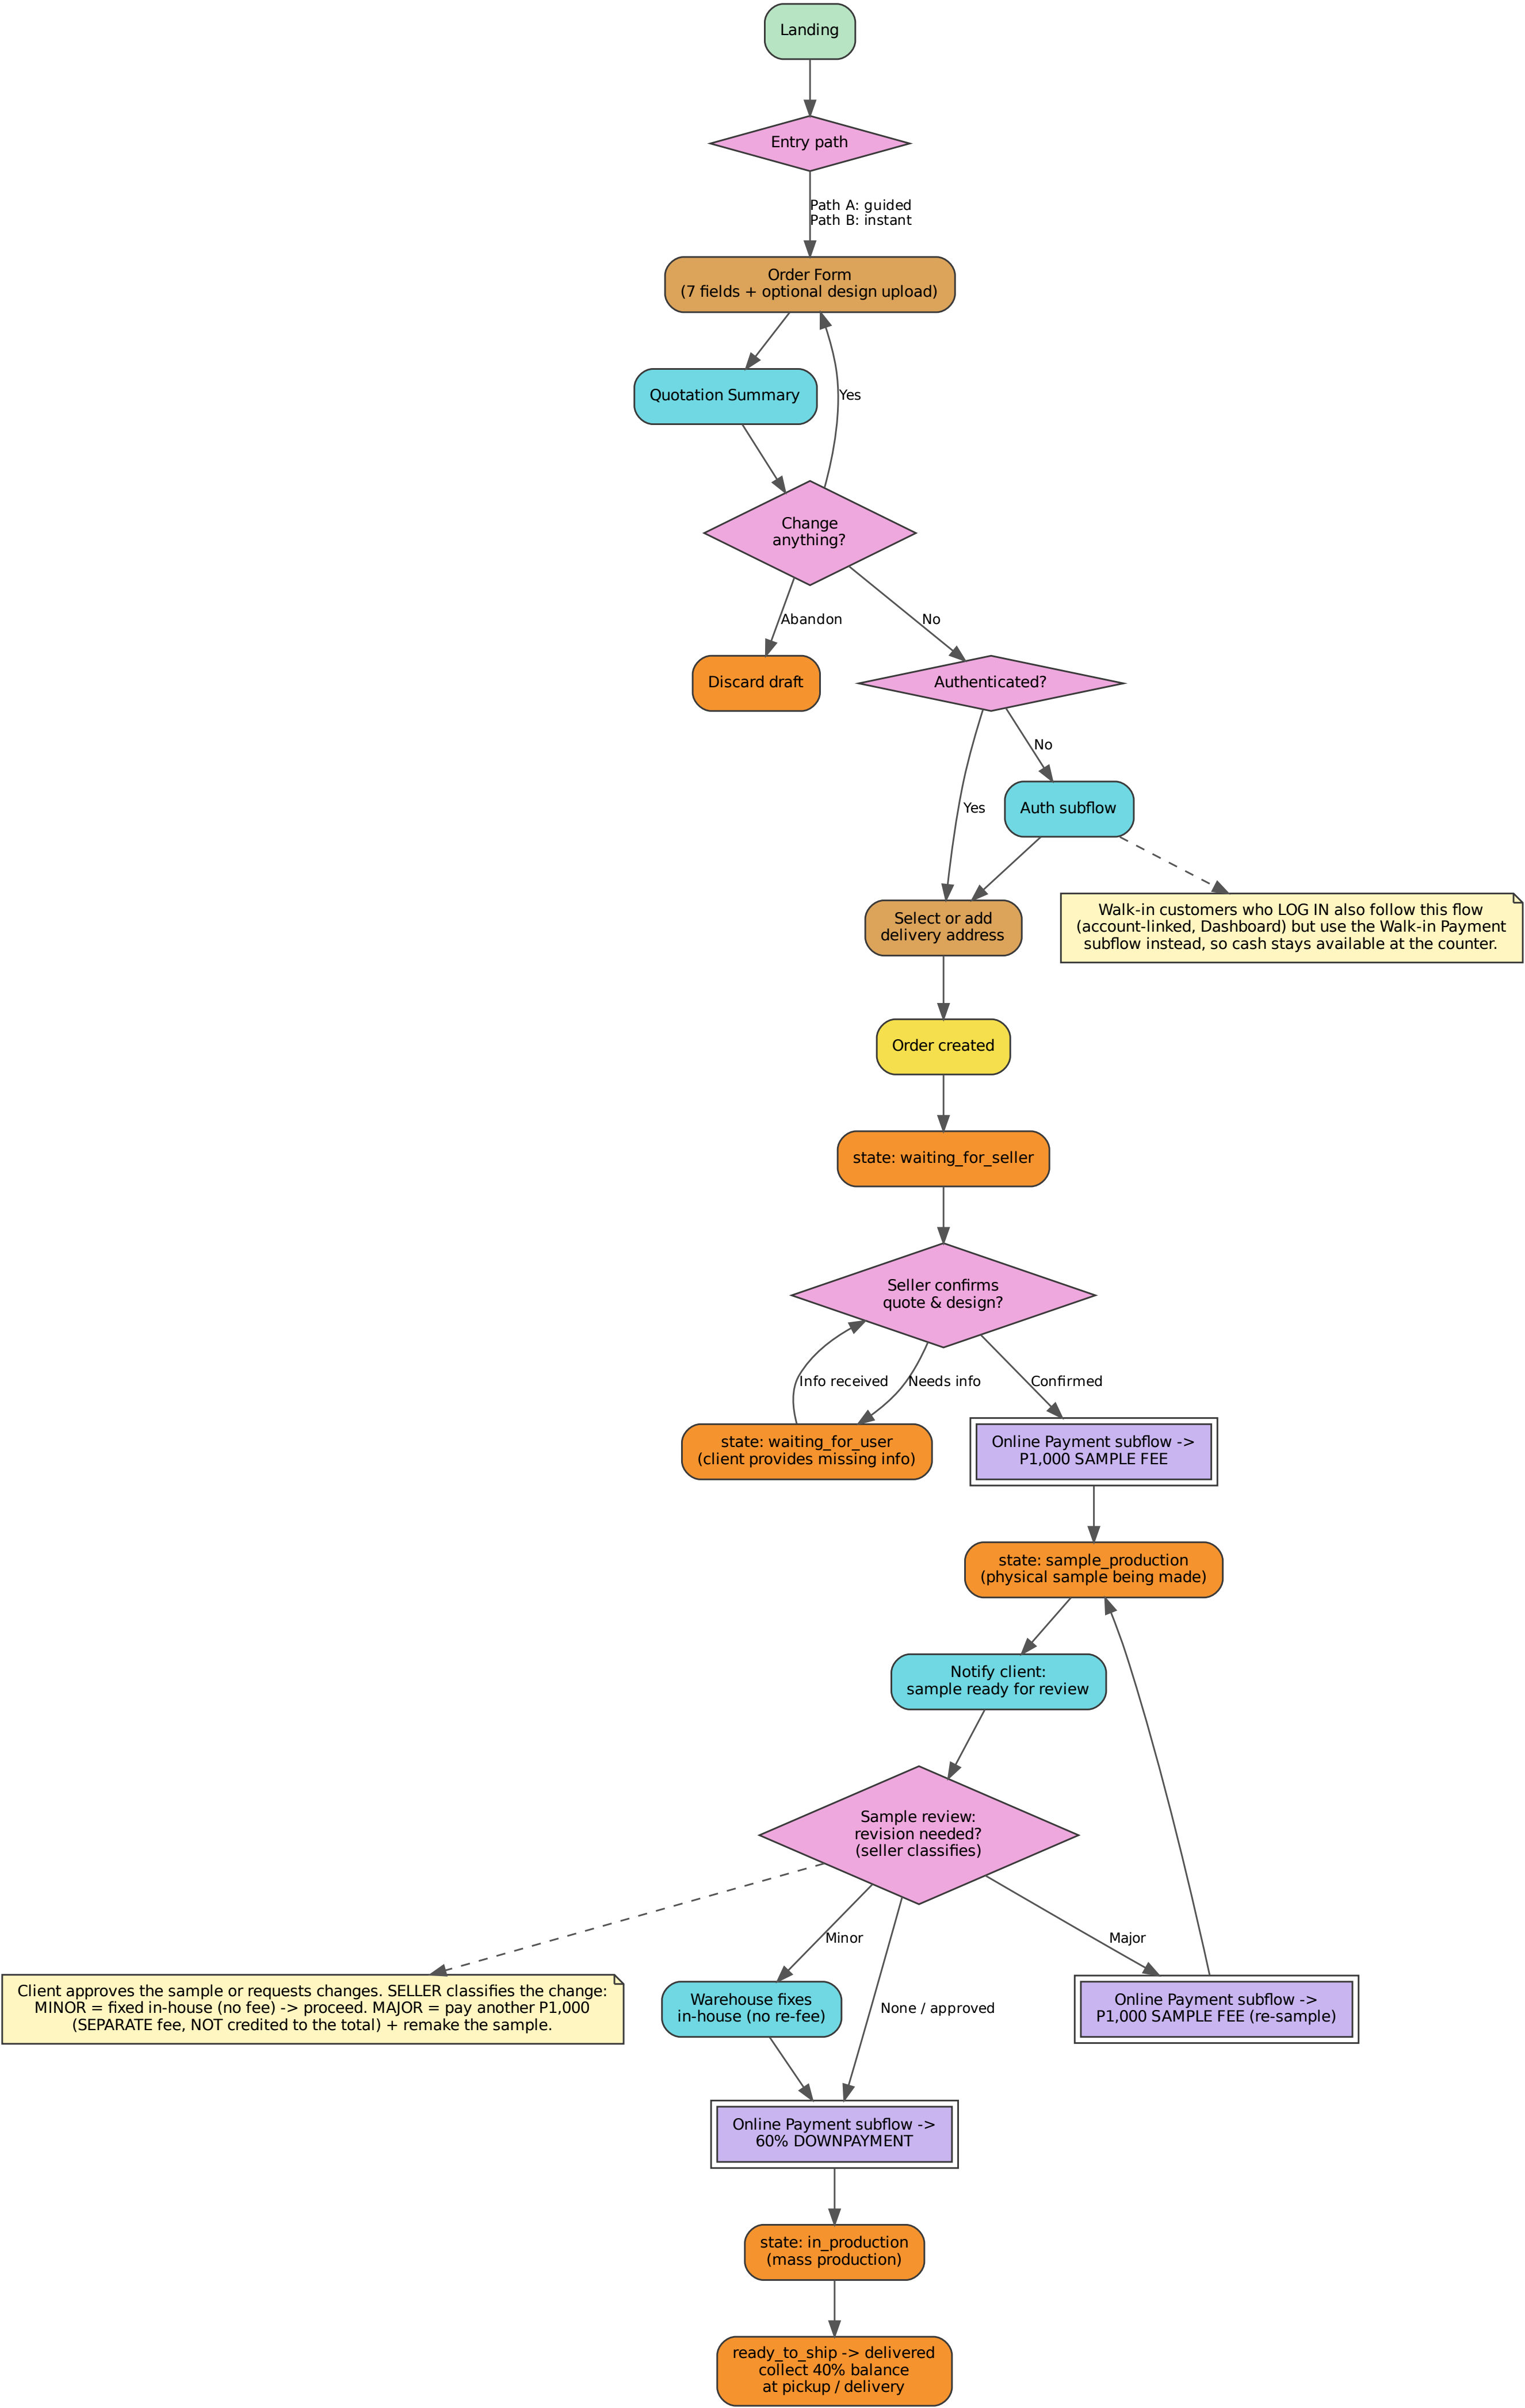

Online Payment Subflow — GCash / Maya / Bank Transfer, NO cash (Revised v8)

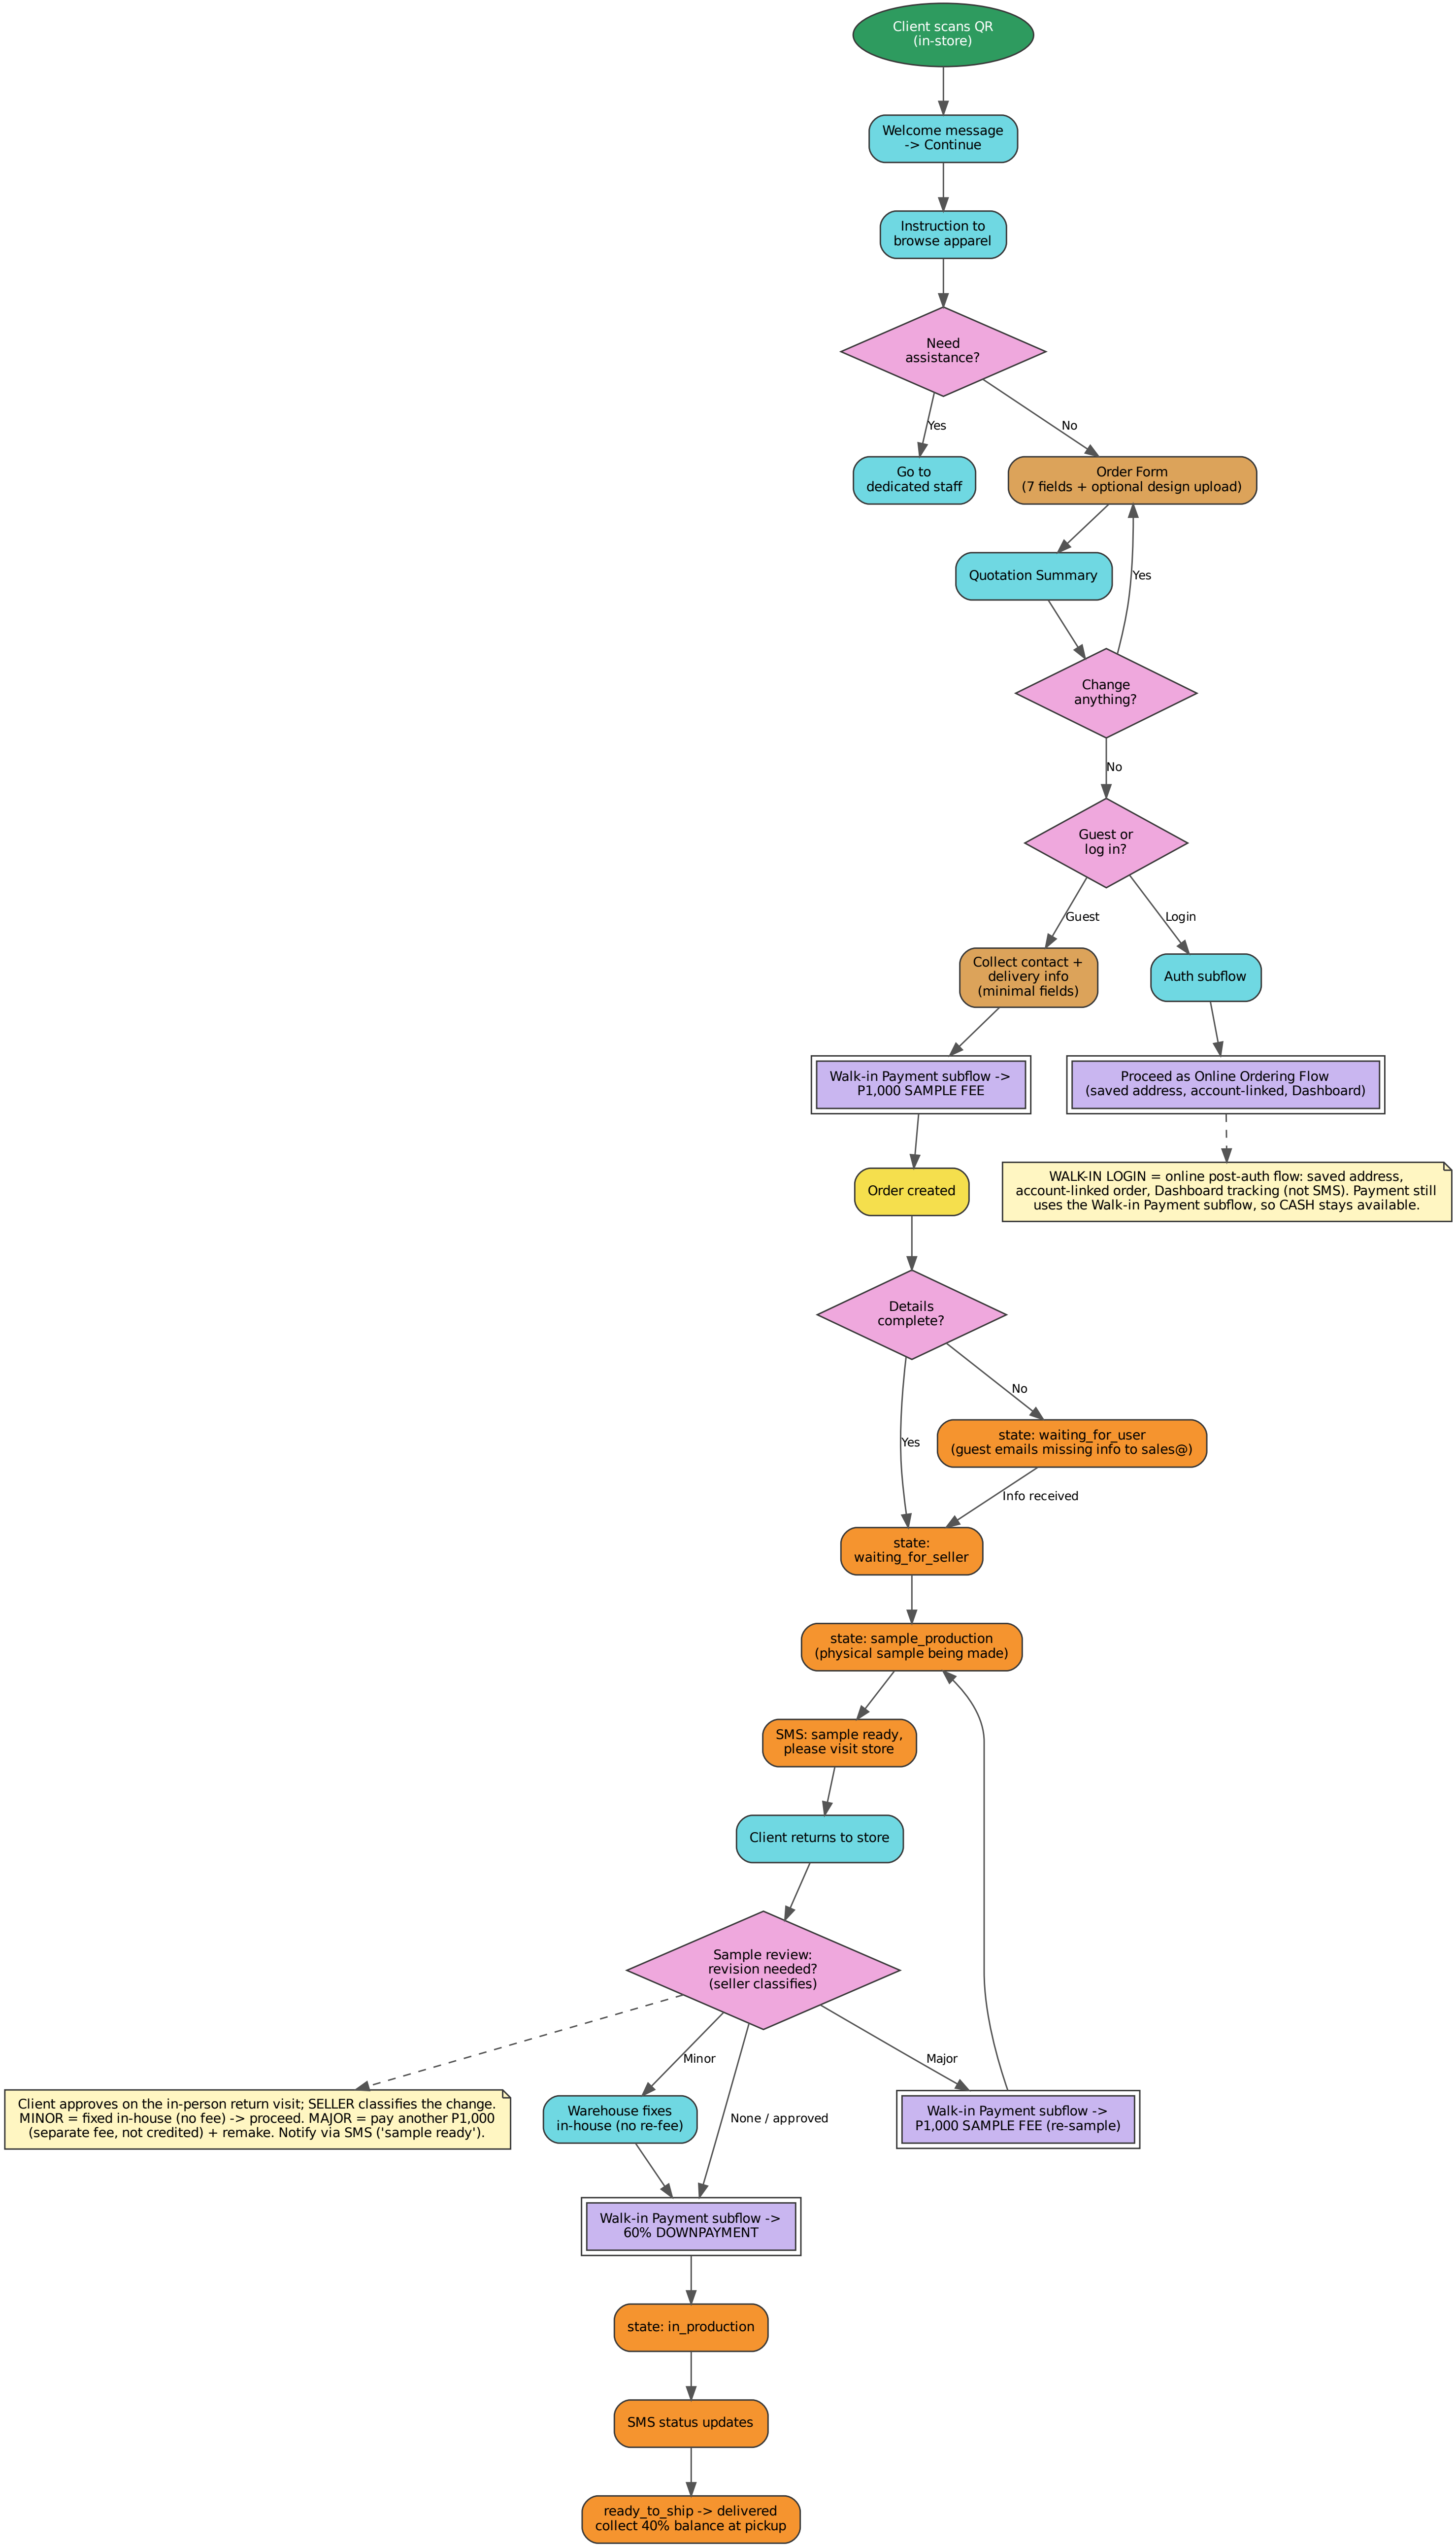

Walk-in Payment Subflow — adds Cash at the counter (Revised v8)

Online Ordering Flow — Path A & B (Revised v8)

Walk-in Kiosk Flow (Revised v8)

Order State Machine (Revised v8)
